

Software

myMCS is where vision meets technology. We offer you a fully integrated Management Information System (MIS) solution. You have access to a best – in – class methodology and technology with extensive functionality for operational optimization as well as performance management. Thanks to the extensible technology of *myMCS* we are able to provide customers with a qualitative, flexible and scalable solution. Each module corresponds to a distinct discipline and can be implemented individually. However, you will obtain the highest return on investment when implemented company wide.

Looking to benchmark your sites, increase your return on assets, follow up your suppliers or subcontractors, get a hold of your maintenance costs, or simply want to optimize your processes and increase customer satisfaction ... *myMCS* can help you meet your targets.

Fast deployment

myMCS can be used company wide because of its significant flexibility, ease of use, short learning curve and high level of automation. At MCS, we believe technology is a means to an end and no end in itself. Therefore everything we do, we do with your business in mind. Optimizing your operations is, and has been since the beginning, our first goal. But, above all, we focus on output through analysis and tracking of key performance indicators.

Integration

Each technology does what it does best. *myMCS* is the solution for optimizing the exploitation of your real estate. MCS has successfully set up integrations with ERP systems, Building Management Systems, Finance and HRM systems ... resulting in our of the shelf *myMCS* SAP integration. Integrations increase simplicity and transparency and are a possible basis for e.g. Activity Based Costing.

Return On Investment (ROI)

In our fast moving economy, there is little room left for adventures. When you invest, you expect return and added value. It is a matter of statistics: the bigger your organization is (space usage, number of employees, assets ...) or the more complex it is, the higher your ROI will be. MCS customers have proved a ROI in less than a year to be feasible, regardless of the project scope or the size of the organization.

FAST-Facility

FAST-Facility, a SAP-certified solution by MCS and Delaware Consulting, offers you an integrated platform for managing your real estate and Facilities. It consists of an unique platform with integrated front and back office applications that allow your organization to obtain a professional facility, real estate and service management level. It is a standard methodology, based on 'best practises' and experience in various international projects.

myMCS Management Informatie Systeem

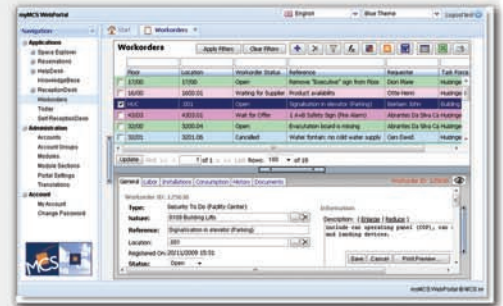

Advanced technology

Without hesitation MCS claims that the cutting – edge technology of *myMCS* is unmatched. In 1999 MCS was appointed the ‘dare to innovate’ award for its advanced technology. *myMCS* offers you full consistency between drawings or floor maps and data. As drawings are transformed into intelligent objects in our database, data and graphics become one. Version control, authorization on layer level and multiple users at the same time are no longer an issue. Obviously neither is import and export of your drawings.

Windows and Web

Both *myMCS* Windows and Web applications are very user – friendly, yet offer extensive functionality. Our solid out – of – the – box solution is fully configurable to your business needs and meets customers’ high standards. While the Windows applications focus on back office activities, Web applications aim at your (internal) customer and supplier relationship. Our web applications are fully integrated in your intranet, help you relieve your back office and at the same time stimulate interaction. In one single environment we offer you the tools to increase insight, save time, reduce costs and meet business objectives.

Reporting

We believe that *myMCS* should help you get in control of your business and its success. With *myMCS* you will benefit from our state-of-the-art management reporting and dashboard tools. While our applications already come with over 200 pre-defined operational reports, *myMCS* Management Reporting enables you to create, edit, run, export and schedule reports on all available data. *myMCS* Dashboards gives you an overview, based on up-to-date information, of the facility and real estate disciplines of your responsibility. No database knowledge is needed and users are not required to leave the *myMCS* environment as all reporting applications are embedded in the *myMCS* WebPortal and are directly accessible.
